	Check soil pH (6.0-6.5 is ideal)

Items marked with the letter A will yield a high quality lawn. Application of the other steps will help build professional quality turf - ask for more details.

* **Turf Trust** is the only fertilizer to contain the compound **CDU®** which stands for Crotonylidene Diurea and is imported from Japan. In Japan, it is the preferred nitrogen source in golf course fertilizers. The **CDU®** will help to control soil borne pathogens that cause Fusarium Blight, Pythium and Brown Patch. This means less disease problems in the summer.
